MEMORANDUM FOR: Deputy Director for Science and Technology
ATTENTION: DD/S&T Comptroller
SUBJECT: OSI Comments on the Proposed Agency
Program Structure

OSI has the following comments regarding the Proposed Agency Program Structure:

a. If the Estimative category is intended to reflect only the ONE effort, as apparently is the case, the result would be most misleading. With the exception of OCI the Agency intelligence producing offices all expend considerable effort on estimates, the total cost of which undoubtedly is several times the cost represented by ONE itself. It would seem more logical to eliminate this category and charge the ONE effort to other applicable categories, i.e., political, military, scientific and technical.

b. We believe the Scientific category should be changed to Scientific and Technical. It is under this category that we would propose to list all of OSI's effort providing our suggestion under d below is adopted.

c. In our view Military implies areas such as Order of Battle, etc. OSI has no responsibility in these areas so that we do not propose to report under it.

SUBJECT: OSI Comments on the Proposed Agency Program
Structure

d. We suggest that the Missiles and Space category be eliminated and that FMSAC report, with OSI, under Scientific and Technical. We propose this course only because if the category is retained, OSI would need to report activities in air defense missiles, anti-ballistic missiles and scientific space under it. Additionally, if Missiles and Space is removed as a category from Scientific (or Scientific and Technical) so should other equally significant areas such as nuclear, ABM, etc.
